So, What is Concrete Resurfacing?

A **concrete floor** is something everyone sees every day and yet is neglected. In short, concrete floor *deteriorates, cracks, stains,* and *surfaces appear pale* over time. This is an indication that it's **time to pay some attention** to the concrete floor. Most of the time repair does not do the job and needs complete resurfacing.

Epoxy Flooring Brisbane offers high-quality service, with public liability insurances, work is done by trained, skilled, and highly qualified staff. We provide a free quote and will answer any question possible.

The concrete resurfacing process includes **cleaning**, **repairing**, and **overlaying** the floor with a new surface adding life to the aged concrete floor.

If you're still thinking about having a concrete resurfacing service, we also have a concrete floor polishing in Brisbane.

Easy steps on how to do **concrete resurfacing**

1. **Clean concrete surface**

First the concrete surface is cleaned by washing with a power washer removing any dirt.

2. **Repair the cracks**

All cracks are then repaired and smoothed evenly.

3. **Fill hole with epoxy**

All holes are filled with epoxy

4. **Prime the floor surface and apply concrete**

After the cracks and holes are repaired, the floor surface is primed, and concrete is applied to the floor.

5. **Design and use sealer**

Depending on the clients need, color and decoration is applied. Sealer is then applied to protect the new surface.

6. **Let it dry**

The concrete is then cured by restricting usage for 48 to 72 hours allowing the surface to dry completely.

Minor cracks, holes, etc can be repaired. However, in situations such as radiation or fire damage, **concrete resurfacing is not recommended**. In such cases, it is advisable to completely replace the concrete. This means that the whole concrete should be removed, and a new set of concrete floors is to be installed.

Cause of Concrete Damage

Concrete is made of *water*, *granular aggregate material*, and *cement* (binding Agent). Damage to concrete occurs when moisture or dirt enters concrete during installation or afterward. The liquid then enters causing the mixture to separate. Temperature also plays a major role in causing the surface to expand or contract. Heavy objects, vehicles, etc also cause cracks to the concrete floor.

Ways to Prevent Further Concrete Damage

Concrete coating, a clear or coloured substance applied to the concrete floor, is used to prevent concrete from getting damaged. It acts as a protector by **coating** and **sealing**, adding

durability to the concrete surface. In addition, **coating concrete** protects the surface against oil, water, chemicals and heavy pedestrian and vehicle traffic. Top products used to coat the surface are Avista concrete sealer, Avista tintable concrete sealer or Sika concrete sealer.

Decorative Concrete Resurfacing

Decorative concrete resurfacing is gaining popularity in Brisbane as users now realise that there are other decorative options than the plain grey color.

Decorating the floor is not only an option to enhance the look of your building but also a useful option in construction. New technology and treatment have helped increase the life of concrete surfaces and reform the look to something amazing.

Benefits of Concrete Resurfacing

- **Long lasting** – Lasts long with a new look durable and strong finish
- **Value for price** – Cost effective
- **Easy process** – Is easier then pouring a new set of concrete
- **More options available** – Endless possibilities for top-coat
- **Safe and Anti-skid options** – Broom finish available

FAQs About Concrete Resurfacing Brisbane

What is concrete resurfacing?

Concrete resurfacing is a professional service offered by Epoxy Flooring Brisbane, where a high-quality overlay is applied to existing concrete to restore its appearance, strength, and durability without replacing the entire slab. It's ideal for driveways, patios, pathways, and garage floors.

Can concrete be resurfaced?

Yes, concrete can be resurfaced as long as the base slab is structurally sound. Surface cracks, stains, and wear can be repaired and renewed with professional resurfacing solutions offered by specialists like Epoxy Flooring Brisbane.

What is the easiest way to resurface concrete?

The easiest and most reliable way is to hire experienced professionals. Working with specialists like **Epoxy Flooring**

Brisbane ensures the correct materials and techniques are used for long-term results.

Can I pour concrete on top of concrete?

Yes, new concrete can be poured over existing slabs with proper preparation and bonding. However, resurfacing is often faster, more affordable, and better suited for improving surface condition without increasing slab height.

Is concrete resurfacing suitable for Brisbane's climate?

Yes, concrete resurfacing works well in Brisbane when quality materials and sealers are used. Properly resurfaced concrete handles heat, UV exposure, and seasonal rain effectively.

How much does concrete resurfacing cost in Brisbane?

The cost of concrete resurfacing in Brisbane depends on the size of the area, surface condition, preparation work, and finish type. Prices typically range from a few hundred dollars for small areas to several thousand for larger projects. **Epoxy Flooring Brisbane** can provide an accurate quote after assessing your surface.

How long does concrete resurfacing last?

Most concrete resurfacing projects take one to three days to complete, depending on the scope of work. Light foot traffic is usually possible within 24 hours, while full curing may take several days. Experienced installers at Epoxy Flooring Brisbane ensure the work is completed efficiently.

Who should I contact for concrete resurfacing in Brisbane?

If you are considering concrete resurfacing, it's best to consult experienced local specialists. **Epoxy Flooring Brisbane** provides professional advice and high-quality resurfacing solutions tailored to Brisbane homes and commercial spaces. Call **1300 321 433** to speak with our team and request a free quote.
