

Floor Coaving

What is Floor Coaving?

Floor Coaving is the process of making a radius between the floor and wall or other vertical surfaces to create a seamless continuous floor. Coaving is particularly used in commercial buildings, schools, kitchen and hospitals where there is a need for hygiene or watertight seal. Epoxy Flooring Brisbane offers a variety of wall to coaving systems with lasting value.

Advantages of a Coaving

1. Prevents water from going under the walls,
2. Easy to clean and maintain floor edges,
3. Makes it unable for insects and bacteria to hide under walls,
4. Attractive and seamless look of the floor,
